TRIENNIAL REPORT

ON THE WORKING OF THE

HOSPITALS AND DISPENSARIES

IN

BIHAR

FOR THE YEARS

1935, 1936 AND 1937.

Introductory.

The years that come under review in this Triennial Report are 1935, 1936 and 1937. Each year has a separate story of its own, but perhaps the most outstanding are 1936 and 1937. These years saw important changes in the administrative and political aspects of the province and these changes have affected on the medical administration of the province. From 1st April 1936, Orissa, as provided in the Government of India Act of 1935, was separated from Bihar and was constituted a separate province. Five districts of the former combined province of Bihar and Orissa were included in the new province, leaving a total of sixteen districts to constitute the province of Bihar. Of the 690 hospitals and dispensaries remaining in the combined province 106 went to Orissa, leaving 584 in Bihar on the 1st April 1936. But the number of dispensaries has since increased and at the close of the triennium their figure stood at 603.

The year 1937 saw the inauguration in the province of the reforms introduced by the Government of India Act of 1935. Important features affecting the medical department are a change in the practice of the deputation of Indian Medical Service officers to civil appointments, the launching of a scheme for combating tuberculosis and the revival of the educational aspects of St. John Ambulance Association, whereby in addition to instruction in the rendering of first aid, the public are taught the elements of the prevention of disease and of the necessity for improved Hygiene and Sanitation. These subjects will be reviewed in separate paragraphs at suitable places and with fuller details.

The period covered by this report is from the 1st of January 1935 to the 31st December 1937. Figures for Bihar only have been taken into consideration in comparisons as far as practicable as Orissa was combined with this province for the whole of 1935, and in the case of some statements, it has not been possible to extricate separate figures for Bihar during 1935. The figures for patients treated in class II-State special, Class V-Private non-aided, and class VI-Railway hospitals and dispensaries during 1935, the sex and nationality of those treated in Class I, III, IV, and VII-State public, Local Fund, Private aided and Subsidized dispensaries, etc. have not been therefore taken into account in the comparative statements.

Administration of the Medical Department.

During the triennium, the following officers held the appointment of the Inspector-General of Civil Hospitals, Bihar (and Orissa 1936).

(1) Col. (now Major-General) H. C. Buckeley, I.M.S.—from the 1st January 1935 to 12th May 1935.

(2) Col. (now Major-General) P. S. Mills, C.I.E., I.M.S.—from 13th May 1935 to 31st March 1936, and from 14th October 1936 to 7th November 1937.

(3) Lt.-Col. (now Col.) J. A. S. Phillips, C.I.E., I.M.S.—from 1st April 1936 to 13th October 1936 (officiating).

(4) Col. H. Stott., O.B.E., I.M.S.—from 8th November 1937 to 31st December 1937.

Medical Personnel (General).

There was no change in the arrangements for medical relief throughout the province and for the control of this work during the years under review. The Civil Surgeon is Superintendent of Medical work in each district and he is helped by other medical officers and subordinates. Civil Surgeons were chiefly of the rank of I. M. S. officers and officers of the Provincial Medical Service. One Civil Surgeon was a directly recruited officer and two officers of the Indian Medical Department Major J. M. Pereira and Major J. S. Salt, held charge of Civil Surgeoncies till 29th May 1936 and 3rd October 1936 respectively.

The subdivisional hospitals were mainly in charge of officers of the assistant surgeon cadre but in some districts (e.g., Ranchi, Palamau and the Santal Parganas) some subdivisions were held by Government sub-assistant surgeons. Civil surgeons attend the sadr hospital daily, take an active part in its management and perform a major part of the medical or surgical work therein. Among other duties they inspect the Police Hospitals daily, the outlying dispensaries frequently, perform autopsies coming to the sadr hospital and control the Government medical officers in particular and local fund doctors in general.

The assistant surgeons attached to the sadr and other subdivisional hospitals remain in charge of their hospitals and of the medical work of their subdivisions and inspect the local fund dispensaries under their jurisdiction.

The medical personnel of the district board hospitals did not undergo any considerable change. The number of licentiates attached to them remained as before. Graduates were employed in very few cases.

Medical Personnel (Statistics).

The statement below is an abstract of distribution of the medical personnel in the hospitals and dispensaries (according to statement B-Personnel statement during the last 3 years :—

Class of personnel.	1935.		1936.		1937.	
	Male.	Female.	Male.	Female.	Male.	Female.
Indian Medical Service ..	11	..	14	..	13	..
W. M. S.	..	1	..	1	..	1
Indian Medical Department	4	..	1	..	..	..
Salaried Graduates (Assistant Surgeons).	176	9	148	15	161	12
Salaried Licentiates (Sub-Assistant Surgeons).	608	44	583	43	587	48
Honorary Graduates ..	14	..	13	2	17	1
Honorary Licentiates ..	..	..	10	..	13	..
Nurses—Europeans or Anglo-Indians.	..	107	..	101	..	102
Nurses—Indian ..	3	108	6	147	4	176
Midwives	..	61	2	62	..	67
Dais	..	80	9	72	..	63
Compounders	642	11	633	10	623	24

The system of associating private practitioners as honorary doctors to hospitals and dispensaries is being tried but has so far proved only a limited success. When a large number of better qualified private practitioners are available, success will no doubt be greater. The scheme of subsidising doctors for practice in rural areas is also being encouraged but it will take time to show results.

Medical personnel (Cadre) (Indian Medical Service and Indian Medical Department).

The condition of the Indian Medical Service cadre described in the previous triennial report changed during the triennium under review. With the introduction of Part III of the Government of India Act, 1935, changes were made by the India Government Defence Department Resolution no. 205, dated the 25th March 1937, in the organisation of Military Medical Services in India (excluding Burma). In Bihar 11 posts are reserved for British and 3 for Indian officers of the Indian Medical Service, as follows :—

(*a*) British officers—		
Civil Surgeoncies	..	6
Senior specialist posts	..	3
Leave Reserve	..	2
Total	..	11
(*b*) Indian officers—		
Civil posts	..	2
Leave Reserve	..	1
Total	..	3

Of (*a*) 6 form the War Reserve and the rest are Residuary posts.

The Orissa Indian Medical Service cadre which is a joint cadre with Bihar, even after the separation of that Province, consists of :—

(*a*) British officers –		
Civil Surgeoncies	..	2
Leave Reserve	..	1
(*b*) Indian officer	..	1
Total	..	4

and of (*a*) one is War Reserve.

There are no posts now reserved for Indian Medical Service officers in the Jail and the Public Health Department but officers who were in Civil before 1st April 1937, will continue to hold their civil appointments.

Civil Surgeoncies.

On the separation of Orissa from 1st April 1936, the number of Civil Surgeoncies in Bihar dropped from 21 to 16. Of these 6 were reserved for British Indian Medical Service officers and two more may be held by British Indian Medical Service leave reserve officers, one was held by an Indian Medical Service officer, one was held by an officer recruited by the local Government direct as Civil Surgeon, two were held by Indian Medical Department officers till the latter part of 1936 and the remaining four were held by officers of the Provincial Medical Service. The Local Government decided in 1935 that the two posts held by the two Military Assistant Surgeons should on their retirement be thrown open to the members of the Provincial Medical Service. By the 3rd October 1936, when the two Indian Medical Department officers Majors J. M. Pereira and J. S. Salt retired, the number of Civil Surgeoncies open to the Provincial Medical Service officers rose to six.

The cadre of 3 Military Assistant Surgeons mentioned in the previous triennial report was thus reduced from 3 to 1. At the close of the Triennium only one Military Assistant Surgeon was employed as Deputy Superintendent, Ranchi European Mental Hospital.

Appointment of permanent Superintendent at the Patna Medical College Hospital.

The proposal to place the Patna Medical College Hospital under the administrative control of a full time officer with more time available than a part time Principal or Professor could be materialised during the triennium. Major Pereira, an Indian Medical Department Civil Surgeon was appointed first Superintendent of Patna Medical College Haspital on 1st November 1935. Major Pereira subsequently retired from the Indian Medical Department and was retained on contract basis as Superintendent of the Patna Medical College Hospital.

Assistant Surgeons.

At the opening of the triennium in 1935, the number of posts of Assistant Surgeons for Bihar and Orissa combined was 110. Out of these 16 posts were transferred to Orissa from the 1st April 1936, leaving 94 for Bihar, which included two posts of Professors of Ophthalmology and Physiology, at the Patna Medical College, which were added to this cadre in 1935. Since the separation of Orissa, the number of posts has risen to 98, by the end of the triennium. This increase of 4 posts is accounted for by—

(1) one Assistant Surgeon for the Pusa Hospital;

(2) the replacement of a Sub-Assistant Surgeon of Latehar subdivisional hospital by an Assistant Surgeon;

(3) one Assistant Surgeon as Professor of Anatomy, Patna Medical College;

(4) an Assistant Surgeon as Obstetrical Registrar, Patna Medical College Hospital.

Seven officers of the Provincial Medical Service proceeded to the United Kingdom for higher studies during the triennium. Of these one returned without prosecuting any study and one is still on leave. The subjects selected for post-graduate studies were Medicine, Diseases of the Chest, Obstetrics and Gynaecology, Surgery and Tropical medicine and Public Health, respectively.

Nineteen officers of the cadre were drawing the new scale of pay (Rs. 180—20/2—340, Rs. 360, Rs. 380) sanctioned in 1932, by the close of the triennium.

The medical arrangements for hostels has not so far been stabilized on a definite basis. After the abolition of the post of permanent doctor for Patna Hostels, the Director of Public Instruction was employing temporary men for the purpose. This arrangement was subsequently transferred to the Inspector-General of Civil Hospitals in 1937. Temporary doctors appointed in charge of hostels are now under this department and for all administrative purposes they have been placed under the Civil Surgeon of Patna. One hostel doctor was appointed by this Department in 1937, from the candidates selected for Provincial Service but not taken in it.

Sub-Assistant Surgeons.

The cadre of Sub-Assistant Surgeons (combined for Bihar and Orissa) stood at 136 (110 sanctioned posts plus 26 leave reserve) at the commencement of the triennium in 1935. From the 1st April 1936, 53 Sub-Assistant Surgeons (36 posts plus 17 leave reserve) were transferred to Orissa whilst the post of one Sub-Assistant Surgeon at Chaibassa Police Hospital was abolished at the same time by amalgamation of the Police hospital with the local sadr hospital. The number of the posts in the resultant cadre was 91 (73 sanctioned posts plus 18 leave reserve).

Three more posts were abolished later due to the replacement of the Sub-Assistant Surgeons at Latehar and Pusa Hospitals by Assistant Surgeons, respectively and due to the amalgamation of the Monghyr Police Hospital with the local Sadr Hospital. One post was, however, added subsequently by the appointment of a Sub-Assistant Surgeon at the newly opened Government hospital at Dumra. The number of posts in the cadre therefore remained at 89(73—3 + 1=71 sanctioned posts and 18 leave reserve) by the end of year 1937.

One post of a Sub-Assistant Surgeon at the Itki Sanatorium sanctioned in 1931 but kept in abeyance owing to financial stringency, was filled up in 1937, and on the opening of the new blocks at the Itki Sanatorium, a Sub-Assistant Surgeon specially trained in Pathological work was posted in the Sanatorium.

The cadre of the Sub-Assistant Surgeon Lady Doctors remained unchanged, i.e., 4. But the Lady Doctor attached to the Patna Medical College Hospital was, under special orders of Government, considered to be the relieving Lady Doctor of local bodies. Her actual duties at the Patna Medical College Hospital have thus been confined to a small sphere.

Casualties in the medical cadres.

Below is a statement showing casualties, retirements, deaths, etc., among the various class of medical staff during the triennium as whole—

——	Retirement.	Death.	1. Resignation or 2. Dismissal.	Transferred.
(1) Indian Medical Service officers ..	2	..	..	5
(2) Non-Indian Medical Service Civil Surgeons.	4	..	..	..
(3) Military Assistant Surgeons ..	2	..	..	..
(4) Civil Assistant Surgeons ..	3	2	..	..
(5) Sub-Assistant Surgeons ..	9	4	1+1	..

Forms of Annual Returns,

The annual returns of the hospitals and dispensaries for the Triennium were compiled on the forms revised in 1934. The form of statement D was further amended by the addition of columns for diseases of women, e.g., "Puerperal fever, Pelivic cellutitis", etc. An item of this form "Other diseases of the generative system excluding tumour" was changed to "Other diseases of male generative system excluding tumours" and an additional column "Other diseases of female generative system excluding tumours" has been added after it. A new column "Disease of new-born infants" has also been added after the column "Labour abnormal". The diseases' statement for 1937 contains the figures under these heads.

Statement A—Number of Hospitals and Dispensaries.

Scientific medical relief is effected through the hospitals and dispensaries. A review of their position thus forms an item of the first importance in any report. In 1935 the number of hospitals and dispensaries in Bihar was 586. This number remained the same during 1936 but in 1937 it rose to 603. In 1936 two dispensaries were closed and two were added to the list and the figure remained at 586. The increase of 17 in the number of dispensaries during 1937 was due to the fact that 11 dispensaries were opened during the year and six dispensaries though previously opened, were recognised and brought on the list in 1937. The following shows the increase by districts :—

(*a*) Dispensaries opened or brought on the list :—

District.	No.
Class I—State Public.	
Muzaffarpur	1
Class II—State Special.	
Patna	1
Class III—Local Fund.	
Shahabad	2
Muzaffarpur	1
Bhagalpur	1
Purnea	3
Manbhum	1
Singhbhum	1
Total ..	9

Class V—Private non-Aided.

Saran	1
Manbhum	1
Singhbhum	1
Hazaribagh	6
Total ..	9

Class VII—Subsidized.

Santal Parganas	1

The Pusa hospital in the district of Darbhanga was closed in 1936 due to the transfer of the Agricultural Research Institute, which had been severely damaged by the disastrous earthquake of 1934 to Delhi. Consequently the Sub-Assistant Surgeon there was withdrawn and one post from the cadre reduced. But Pusa is a popular place. The local Government decided to maintain an Agricultural and Co-operative centre at Pusa and as many Government officials had to remain there, the hospital was reopened in July, 1937. This time a Civil Assistant Surgeon was placed in charge. At first treatment was confined to Government servants only but later when the Darbhanga District Board agreed to pay a contribution, the hospital was opened to public also. A managing committee was constituted, half the members being recommended by the district board.

The Public Works Department opened a dispensary at Lautaha near Gopalpur, Motihari, in 1935. A Government Sub-Assistant Surgeon was temporarily placed there. The dispensary was ultimately closed by the 31st December 1936 when the construction of court buildings was completed.

There were no travelling dispensaries in the province during the triennium but the class V dispensary opened in Saran ranked as a Travelling dispensary maintained by Hathwa Raj.

(*b*) Dispensaries closed :—

Class II—State Special.

District.	No.
Monghyr	1
Santal Parganas	1
Total ...	2

(*b*) *Class III—Local Fund.*

Gaya	1
Singhbhum	1
Total ...	2

Class VII—Subsidized.

Manbhum	2

The two State-Special hospitals closed were Police hospitals. They were amalgamated with the local Sadr hospitals on the condition that the Police Department would pay a fixed contribution towards the cost of treatment of the police patients, for whom a number of beds would be reserved in the Sadr hospitals.

(*c*) Dispensaries transferred from one class to another :—

District.	Number of dispensaries.	Transferred from—	To—
Champaran ...	2	Subsidized (class VII)	Local Fund (class III).
Hazaribagh ...	1	Private aided (class IV)	Ditto.
Do. ...	5	Private non-aided (class V).	Ditto.
Do. ...	2	Railways (class VI) ...	Private non-aided (class V).
Manbhum ...	3	Subsidized (class VII)...	Local Fund (class III).

Statements C and D—Accommodations in the hospitals.

A provision of sufficient indoor accommodation in hospitals and dispensaries forms an important part of the scheme of medical relief. Such is necessary and increases the popularity of a medical institution and, therefore, requires special attention. The number of beds in all classes of hospitals and dispensaries was 3,410, 3,402 and 3,704 for males and 1,631, 1,726 and 1,944 for females during the years 1935, 1936 and 1937, respectively. The increase in the number of beds for females is a clear indication that the women of Bihar are shaking off their usual apathy towards the hospital treatment and deriving the benefits of the scientific system of medicine. The number of beds in the State Public, Local Fund and Private-aided institutions, which formed the bulk of the general medical relief centres during the triennium, was as shown in the table given below which also contains average figures for Bihar for the last triennium 1932—34 :—

Class of patients.	Average number of beds in 1932—34.	Beds in 1935.	Beds in 1936.	Beds in 1937.
Males	2,181	2,246	2,291	2,406
Females	1,219	1,263	1,273	1,281

Indoor accommodation for males and females classified according to municipal and rural areas was :—

——	1932—34.	1935.	1936.	1937.
Municipal	2,655	2,727	2,790	2,902
Rural	745	782	774	785

The above tables show a marked increase in the number of beds in the hospitals and dispensaries from the beginning of the triennium to the end of it. The following additions are worthy of notice :—

Name of hospital.	Increase in no. of beds. Male beds.	Female beds.
Patna City hospital	26	15
Gaya Infectious Diseases hospital	10	2
Bettiah King Edward memorial hospital	44	..
Jamalpur hospital	28	2
Lakhisarai hospital	5	1
Madhipura subdivisional hospital	9	1
Supaul ditto	8	8
Ranchi Sadr hospital	16	..

I have charted out chart II—the total authorised beds provided in the hospitals (classes I, III, IV and VII) of this Province also the male beds and the female beds. A comparison should be made between the average beds and the daily average in-patients, which are also charted. It is clear that for the past few years the daily average number of in-patients have gradually approached the total number of authorized beds. This means that each year few hospital beds were vacant and hospital accommodation has been year by year increasingly full. The time will shortly come when bed accommodation in all hospitals will have to be extended. The chart shows that the increased provision of beds in the past has been made the fullest use of.

Statements C and D—(contd.) No. and class of patients.

The total number of patients, males and females, treated in all classes of hospitals and dispensaries in the province was 6,177,313 in 1935, 6,624,488 in 1936 and 7,502,226 in 1937. The number of patients treated in the State Public, Local Fund, Private-aided and Subsidized Hospitals are detailed below :—

Years.	In-patients.			Out-patients.			Total.		
	Male.	Female.	Children.	Male.	Female.	Children.	Male.	Female.	Children.
1935	43,084	21,232	8,038	2,392,808	940.469	1,396,576	3,435,893	961,701	1,404,614
1936	45,467	22,645	8,932	2,621,959	1,071,280	1,505,609	2,667,426	1,093,925	1,514,541
1937	50,241	24,391	9,586	2,916.576	1,189,582	1,685,253	2,966,817	1,213,973	1,694,838

Charts III and IV shew year by year the number of men, women and children, treated as in-patients and as out-patients respectively in public hospitals (I, III, IV and VII) of Bihar Province (excluding the Orissa figures) since 1912. These charts provide a satisfactory indication of the progress attained by the scientific system of medicine amongst the people of Bihar and of the expenditure and effort incurred by Government to meet this demand of the people for hospital and dispensary treatment.

The increase in hospital in-patients is seen to have been easily progressive in the case of men and women, but the increase has been somewhat less rapid in the case of children in-patients. As regards out-patients an annual rise in all curves whether for male, female or children out-patients is obvious. The rise in the male curve is on the whole more rapid than those for women and for children in which the rise has been on the whole alike. The fall in attendances in 1932, was no doubt due to the fee of anna 1 to ½ anna charged per prescription in all local fund institutions which was introduced in that year.

Distribution of abovementioned patients in municipal and rural areas was as shown herewith.—

—	Figures for—	1935.	1936.	1937.
Municipal ...	In-patients	60,365	64,403	70,274
	Out-patients	1,099,785	1,173,008	1,250,654
	Daily average of in-patients ..	2647·20	2852·77	3081·06
	Daily average of out-patients ..	8983·05	9921·53	10737·79

—	Figures for—	1935.	1936.	1937.
Rural ..	In-patients	12,528	12,641	13,944
	Out-patients	3,549,649	4,025,840	4,540,756
	Daily average of in-patients ..	532·39	554·90	588·96
	Daily average of out-patients ..	26256·25	30157·84	33924·17

These patients can be classified under other 3 heads, viz., treated in general, female and subsidised dispensaries respectively. Under these categories they will fall as follows :—

Years.	General dispensaries.		Female dispensaries.		Subsidised dispensaries.		Total daily average attendance.	
	In-door	Out-door.	In-door.	Out-door.	In-door.	Out-door.	In-door.	Out-door.
1935	69,096	4,617,997	3,797	24,254	...	21,618	3001 35	34687·87
1936	73,642	5,150,971	3,402	23,664	...	24,213	3259·89	39561·24
1937	79,790	5,754,895	4,428	20,636	...	5,659	3483 98	44166·00

The results of treatment of the in-patients given above are shown in the table below in percentages :—

Year.	Cured.	Retained.	Discharged otherwise.	Died.	Remaining.
1935	61·55	16·09	12·76	5·56	4·04
1936	61·61	15·68	12·73	5·65	4·23
1937	60·42	16·20	13·53	5·86	3·99

The details of the number of patients treated in the State-Public, Local Fund, private aided and subsidized hospitals only have been dealt with above. The other special classes of hospitals and dispensaries such as State-special (including Police, Canals, etc.), private non-aided and Railways are commented on below. Only statement D (Diseases statement) of these dispensaries are submitted and in this case no other figure than of the total number of patients treated is available. The table given below furnishes this information.

Class of Hospitals.	Total number of patients treated. 1935.	1936.	1937.
Police	21,211	24,860	25,517
Canals	5,699	5,038	5 465
Others (e.g., Lautaha P. W. D.)	1,290	4,722	..
Private non-aided (under Government supervision)	338,043	359,880	459,884
Private non-aided (not under Government sepervision).	569,914	651,178	829,038
Railways	302,855	302,918	333,567

Some of the most important hospitals in the province which treated a large number of cases during the triennium are :—

	Hospital.	Indoor.	Outdoor.
State Public Local Fund and Private Aided.	Patna Medical College Hospital ..	32,045	223,108
	Darbhanga Medical School Hospital	12,137	183,866
	Bettiah K. E. M. Hospital ..	5,710	157,153

	Bamdah Mission Hospital ..	8,432	12,310

To sum up, the figures of the number of patients treated in the hospitals and dispensaries show a continued tendency to rise from year to year. This is a good sign indicating the growth in popularity of the institutions providing treatment by the scientific system of medical treatment, specially in villages. But the immediate reasons for some increase in the number of patients can be attributed to malaria in Purnea district and in the districts of the Tirhut division. Whatever be the immediate reasons for the continued popularity there is no doubt of sustained progress towards medical relief in rural areas.

Statement D—Diseases.

A review of the diseases treated in hospitals and dispensaries, with special reference to their geographical distribution, will give some idea of the health of the province during the triennium. It would help to locate the healthy and unhealthy areas of the province. But before considering some principal diseases, a general survey of the health of the province is perhaps desirable. On comparing the figures for the total number of patients treated in all classes of hospitals during the years of review, it appears that 1937 has been the unhealthiest of all. The number of patients treated during this year shewed an enormous increase. In this year they totalled 7,502,226 against 6,177,313 in 1935 and 6,624,488 in 1936. There was an all-round increase in the number of patients suffering from various diseases but it was most marked with malaria, kala-azar, eye diseases, diarrhœa and dysentery and some local diseases. In part the increase may also be due to the fact that people have begun to appreciate hospital services and therefore to attend hospitals in increasing numbers.

Cholera.

Cholera is one of the principal diseases of Bihar, but during that triennium it was kept in check. The number of cases treated and deaths in hospitals and dispensaries was 15,409 treated, 127 deaths in 1935, 2,968 treated, 116 deaths in 1936 and 7,972 treated, 181 deaths in 1937. According to the report of the Director of Public Health, Bihar, deaths from cholera in the province were 57,136, 6,070 and 19,949 during the same three years. This shows that the epidemic was much less prevalent in 1936. A better co-ordinated arrangement for preventive measures by the Director of Public Health such as the disinfection of wells, tanks, etc., and the distribution of cholera Bacteriophage in much larger quantities and wider cholera inoculation have brought the disease increasingly under control. In 1935 cholera was epidemic in almost all districts but by the close of triennium, i.e., 1937 the intensity was marked in Gaya district only.

Among the diseases that caused the heaviest mortality, the returns under malaria occupy the foremost position. As recorded by the Public Health Department the mortality from fever was 499,912 in 1935, 559,005 in 1936 and 584,853 in 1937 and the number of cases of malaria treated in the hospitals and dispensaries was 732,745, 1,092,842 and 1,302,498, respectively, during the corresponding years. In the two latter years of the triennium, malaria became severely epidemic. Though many cases were treated in the hospitals and dispensaries of every district malaria was most prevalent in North Bihar, i.e., in the districts of Champaran, Muzaffarpur, Darbhanga, Monghyr, Bhagalpur and Purnea and to some extent Manbhum. Muzaffarpur, Darbhanga and Purnea have been hot beds of malaria and in these districts nearly 2 lakhs of patients have been treated each year in the hospitals and dispensaries only. The deaths from fever in these districts have also been very high. And though the mortality from fever covers many other diseases which have fever as their main symptoms, malaria has been probably one of the foremost reasons for such deaths. The epidemic of malaria was so intense in the districts of Muzaffarpur and Darbhanga that many temporary anti-malaria centres had to be established by the Government, Public Health Department and by the district boards in the most intensively affected areas to combat it. The problem as to what proportion of these deaths are due to malaria, and to kala-azar, and to other causes is for the future to decide. Certainly a large number of deaths really due to kala-azar pass unrecognized and are considered as due to malaria. In 1936 and 1937 the Red Cross Society contributed Rs. 1,090 and Rs. 3,500, respectively, towards supply of diet (e.g., sago, etc.), to the malaria patients. **Malaria.**

The malaria problem is a menace to the health of people of the province specially in the North Bihar where the disease follows floods of every rainy season and persists throughout the year. The land levels of these districts has considerably changed since the earthquake of 1934. The levels towards the south of these districts have become raised whilst corresponding depression has arisen towards the north ; such altered levels prevent much of the flood and rain water from draining towards the Ganges in the south. Areas of silt damp with stagnant water have thus arisen and provide suitable areas for mosquito breeding. The question is engaging the serious attention of Government but the prevention of mosquito breeeing forms a part of a scheme for prevention of floods which have been more frequent since the great earthquake of 1934.

Kala-Azar is intimately connected with the same areas north of the river as malaria. The number of cases treated in hospitals and dispensaries was 57,400 in 1935, 68,252 in 1936 and 91,942 in 1937—the rapid rise in incidence from year to year is most noteworthy. The areas most affected by the malady were malaria-stricken districts of Saran, Muzaffarpur, Darbhanga, Monghyr and Purnea. **Kala-Azar.**

The Chart I shows how the number of Kala-Azar cases voluntarily coming to hospitals and dispensaries for treatment since 1912, has increased. The situation is serious. There is no accurate knowledge as to what proportion of deaths in these areas and of fever of these parts believed to be malarial is in reality due to Kala-Azar. No doubt the large portion is malarial but also undoubtedly many febrile cases really Kala-Azar do not come to hospital at all and are probably considered locally as malarial. A note on the Kala-Azar position in Bihar with an indication of the practical manner in which this big question may best be tackled has been published. The annual increase in the number of cases of Kala-Azar attending hospitals for treatment is set out in Chart I which increase has been not inappropriately described as " alarming".

The Government grant for purchase of Kala-Azar treatment has been increased to Rs. 20,000, Rs. 4,000 for Government institutions and Rs. 16,000 for local fund hospitals and dispensaries. The Kala-Azar figures for 1937, show a very big increase and further special measures for treatment and prevention will have to be considered.

Infectious diseases—Small-pox and Plague.

Small-pox and Plague were not really severe during the triennium. Mortality from small-pox was 17,429 in 1935, 22,863 in 1936 and 7,645 in 1937 and the number of cases treated in hospitals and dispensaries, during the corresponding years, was 1,169, 1,748 and 524 respectively. The disease appears to have been brought under control during recent years credit for which may perhaps be given to the satisfactory organization of vaccination amongst children. The Medical Department has little to do regarding this disease which falls within the domain of the Public Health Department.

Plague was even less severe than small-pox. Though in some districts Plague occurred sporadically it never assumed a dangerously epidemic form. The districts of the Tirhut division were the only Plague affected parts. Deaths numbered 2,871 in 19?5, 1,245 in 1936 and 1,?70 in 1937 and were confined chiefly to Saran and Champaran. Hospitals and Dispensaries treated very few cases numbering 869, 687 and 229 during the years 1935, 1936 and 1937 respectively.

The disease appeared in the winter seasons and disappeared with the advent of dry months of March. As in the case of small-pox the Public Health Department took necessary preventive and protective measures such as inoculation, disinfection and segregation in affected areas. Towards the end of 1937 arrangements were made for the experimental treatment of Plague cases with Anti-Plague serum by a special staff from the Haffkin Institute, Bombay. Though the results of this treatment really falls within the next report, yet the satisfactory results obtained, and the scientific manner in which the treatment was carried out may be recorded here.

Influenza.

71,898 cases of influenza were treated in hospitals and dispensaries in 1935 and the figures for 1936 and 1937 are 106,982 and 121,957 respectively. Deaths from the disease in the hospitals were almost insignificant being 15, 17 and 11 during the corresponding years.

Influenza increased during the triennium and was more prevalent in Patna, Gaya, Monghyr, Manbhum and Singhbhum.

Dysentery and Diarrhoea.

These diseases arise from contamination of food and water and as in the case of cholera the infection is transmitted by individual carriers or by flies from one place to another. The mortality from the combined diseases was reported to be 4,044, 3,118 and 4,006 in 1935, 1936 and 1937 respectively. 103,853 cases of diarrhœa and 119,118 cases of dysentery were treated in the hospitals and dispensaries during the year 1935 and the corresponding figures for 1936 and 1937 were 103,259, 120,189 for diarrhoea and 121,571 and 152,594 for dysentery respectively. No epidemic from these diseases arose.

Leprosy.

Leprosy is a disease in which improvement or progress is very slow, even when the best possible medical aid is provided. The disease occurs almost throughout the province but the districts of Champaran, Muzaffarpur, Santal Parganas and Manbhum treat largest number of cases. There were five Leper Asylums (Muzaffarpur, Gaya, Bhagalpur, Deoghar and Purulia) and one Leper Colony (Saldaha, Santal Parganas) till 1936. One Leper Asylum (Nabakushta Nibas, Balarampur, District Manbhum) was added to the list in 1937 making the total number of six Asylums at the close of the triennium.

The total permanent accommodation in the Asylums was 1,851 in 1935 and 1936, and rose to 2,100 in 1937. The number of lepers resident in them was 2,246 in 1937 against 2,104 in 1936 and 1,844 in 1935 and the out-patients treated by them during the corresponding years numbered 4,069, 3,491 and 4,625 respectively.

Rs. 1,60,486 were spent on the maintenance of these asylums and colony in 1935 and the figures under the same head stood at Rs. 1,59,082 in 1936 and Rs. 1,66,250 in 1937. Out of these sums Government contributed Rs. 48,503 during 1935, Rs. 72,770 and Rs. 66,597 in 1936 and 1937 respectively and the Local Bodies' contributions were Rs. 79,338, Rs. 90,752 and Rs. 91,028 during the corresponding years.

A number of outdoor clinics worked at various places in the province. Of these two were maintained by Government and the rest by the local bodies. Their number was 41 at the close of the triennium (1937) while at the beginning (1935) it was 36.

The number of cases treated in them were 17,813, 17,072 and 17,967 in 1935, 1936 and 1937, respectively.

The number of leprosy cases treated in all classes of hospitals and dispensaries was 7,162 in 1937 against 7,336 in 1936 and 5,006 in 1935.

The Bihar Branch of the British Empire Leprosy Relief Association aided both anti leprosy survey and treatment. It distributed grants to all Leper Asylums and clinics. Since the abolition of the post of the Leprosy Expert in 1932, no definite survey or propaganda work was carried through Government agency but at the close of the triennium an Assistant Surgeon was appointed as Leprosy Officer in addition to his appointment as Tuberculosis Officer and the review of his work will find place in the report for the next year.

Some propaganda and survey work was carried out by the local bodies such as Jharia Board of Health and Manbhum Leprosy Relief Association and several district boards.

As usual 2 Sub-Assistant Surgeon's were trained during every year of the triennium in special leprosy work at the Calcutta School of Tropical Medicine. At the Darbhanga Medical School some Sub-Assistant Surgeons and L. I. Doctors were also trained as usual. Courses of 24 lectures were arranged for the students of the Patna Medical College at the Gait Skin Clinic, Gulzarbagh, Patna.

No research of note was carried out regarding leprosy treatment. Dr. H. Roy of the Purulia Leper Home and Hospital made an investigation on the bearing of the sedimentation index on curative treatment, whilst Dr. L. Whittaker of the same hospital investigated the effect of injecting Hydrocreol locally into tropiculcers. The results had not been published till the end of the triennium. An extensive trial with brilliant green, 1 in 3,000 solution, was given on leprotic ulcers at Saldaha Leper Colony but with unsatisfactory result.

There is not the least doubt that the most practical way in which to tackle the leper problem is by the provision of inexpensive semi-permanent bamboo and mud huts, reinforced with kutcha brickwork for the segregation of active cases, where they can co-operate in some form of colony life. Such attempts as are being made at the Naba Kustha Nibas, Balarampur in Manbhum district and the organization and persistence with which these attempts have been made to progress towards a successful conclusion have rightly won appreciation from all who have seen them. Such attempts deserve every encouragement. A constructive anti-leprosy policy for the province requires to be more clearly defined.

Tubercle of the lung.
Anti-tuberculosis Activities.

Tuberculosis is becoming a menacing scourge in India and the adoption of practical measures to combat this disease are required to be worked out and put into practice. The toll taken by tuberculosis in this province as judged by Hospital returns increased during the triennium under review. The number of cases of Tuberculosis of lungs treated in all classes of hospitals and dispensaries during the year 1935, 1936 and 1937 being 15,911, 20,631 and 21,492, respectively. Its incidence was more marked in the districts of Patna, Saran and Monghyr.

The problem is already engaging the attention of the local Government and the Medical Department and measures for prevention and treatment of the disease are being taken. The Itki Sanatorium was opened in 1929 for treatment of Tubercular patients and the work it has accomplished as described in its annual reports, speaks for itself. Suffice it to say that the standard of treatment and administration in that Institute compares favourably with any in India or even in the ideal sanatoria of Switzerland and other parts of Europe. With a view to make a general propaganda, etc., against the disease and to aid the adoption of satisfactory measures for its diagnosis, prevention and treatment, a branch of the King George Thanksgiving (Anti-Tuberculosis) Fund, Delhi, was opened in this province in 1931. The activities of this society have already been reviewed in the last Triennial Report and no comment is necessary on it. But to give these activities a wider range and greater impetus an Anti-Tuberculosis Association was subsequently formed in the province in 1936, under the auspices of the King George V Memorial Fund

Association. There is a working committee of the Association of which the Hon'ble Minister, Local Self-Government is the President and the Inspector-General of Civil Hospitals is the Secretary. This committee met officially for the first time on the 8th January 1937 and chalked out detailed plans of action.

The Provincial Anti-Tuberculosis Branch Association has already laid down a detailed and practical scheme. It is mainly educative, as well as curative, the educative aspect being emphasised as more important. The outlines of the scheme are as follows :—

(I) Constitution of—

(*a*) A Central organisation consisting of (1) a Main and (2) of a working committee, working in co-ordination.

(*b*) An agency for dealing with propaganda work (the working committee).

(*c*) A local committee at each district headquarters with an attached Tuberculosis clinic.

(II) Provision of—

(*d*) Hospital or sanatorium treatment by provision of requisite beds in all the chief hospitals of the province for Tuberculosis patients.

(*e*) After-care Tuberculosis Colonies and settlements by providing segregated and sanitary accommodation in healthy places for housing patients after they have been discharged from the hospitals.

The main objective of the scheme hinges round the provision of Tuberculosis clinics in each district headquarters.

The functions of these clinics will be—

(*a*) To search out early cases of Tuberculosis and place them under treatment before the curable stage is passed.

(*b*) To supervise the home conditions of the patient and to educate him and of his relatives and friends to prevent the spread of infection.

(*c*) To keep suspected contacts under observation.

Each clinic will be housed in a separate building constructed on type plan approved by the working committee. The staff would consist of (1) one or two Honorary M. B. medical officers selected from the local practitioners and especially trained at Calcutta (2) one male and one female, Health visitor trained at Calcutta, (3) and other staff. The cost of opening, furnishing and running the clinics has to be met (1) from the contribution of Rs. 2½ lakhs made by the King George V Memorial Fund, Bihar, (2) an annual recurring grant of Rs. 10,000 from the local Government, and (3) local subscriptions and donations. Each clinic would get Rs. 10,000 for construction of building.

By the close of the triennium only one clinic was opened at Bhagalpur.

An officer of the Provincial Medical Service, Dr. P. K. Basu, was appointed as Anti-Tuberculosis Officer in October 1937 and he was given special training at Calcutta and his duty is to supervise the working of the clinics and carry out Anti-Tuberculosis propaganda.

Four Honorary Medical Officers were trained during the year 1937. Much further work is now required. Firstly, the provision and development of the foregoing policy—which at present is merely on paper in each district headquarters. Secondly, some practical lines which the Home treatment of poor tuberculosis patients can follow. Thirdly, the provision of inexpensive Sanitoria for paying and for pauper patients built on a cheap mud and bamboo plan which at present seems the only practical way in which the finances available can hope to tackle this Sanitorium aspect of Anti-tuberculosis work.

It is hoped to take up each item of this work successively during the ensuing triennium. The Anti-tuberculosis work of the Province requires defining and developing on a clearly laid down practical and economical policy.

Venereal diseases. Venereal diseases include gonococcal infection and syphilis (primary and secondary). The number of patients treated for the disease in hospitals and dispensaries was 55,993 in 1935, 64,235 in 1936 and 66,268 in 1937. Government have sanctioned a fixed grant of Rs. 9,500 annually to the sadr and subdivisional hospitals in the province including the Government hospitals during the triennium. The Public Health Department carried out as usual Anti-Venereal propaganda among the prostitutes in the Sonepur fair by explaining to them through lantern lectures the easy methods of prevention of the disease and distributing potassium permanganate packet and prophylactic ointments for proper use. The Red Cross Society also took a keen interest in combating the disease and grants from their funds were received from time to time for treatment of women suffering from venereal diseases in the hospitals and dispensaries. The Professor of Pathology, Patna Medical College, is proposing to analyse the cases of some of thousands of syphilitic patients, which will help further knowledge concerning the incidence, symptomology and Wasserman Reactions of the disease in this province.

Diseases of the Eye. Diseases of eye were widespread. Such diseases shewed an increased attendance at hospital from year to year during the triennium. The number of patients suffering from different kinds of eye diseases treated in hospitals and dispensaries was 420,259 during 1935 and the corresponding figures for 1936 and 1937 were 462,833 and 493,794 respectively. The operation for extraction of lens numbered 3,700 and 4,581 during 1936 and 1937, figures for 1935 being inseparable from the Operation statement of Bihar and Orissa for that year.

An annexe for the treatment of eye diseases was as usual maintained at the Patna Medical College Hospital where patients coming from outside for cataract operations or other eye treatment during winter seasons were accommodated. In this annexe preliminary treatment or after treatment is given, so as to avoid overcrowding the beds available in the Eye Hospital with case that can be well accommodated elsewhere.

Ankylostomiasis Hook-worms. This disease appears most frequent in the districts of North Bihar. Its incidence was more marked in Saran and Darbhanga. Patna, Gaya, Muzaffarpur, Monghyr and Purnea, were also affected to some extent. The number of cases treated in hospitals and dispensaries was 26,065, 28,312 and 26,126 during 1935, 1936 and 1937 respectively. Hook-worm infection severely affects the health of the people in those areas where it is prevalent. More investigation is required as to its frequency.

Rheumatic Infection. The disease statement provides a separate column for this disease. During the triennium 88,175 cases under the head of Rheumatism were treated in hospitals and dispensaries in 1935 and the figures for 1936 and 1937 were 93,541 and 88,184 respectively. These figures of course, include, lumbago, myalgias and other vague aches and pains, and give no indication of acute or sub-acute rheumatic infection or of the fatal mitral valve heart disease following it.

No attention was paid to rheumatic infection in any previous report, but this disease is a most important cause of mitral stenosis and of mitrol valve disease and of the consequential death from heart failure about the age of 20 years in young Indians.

Snake-bite. Treatment of snake-bite cases forms an important emergency duty of hospitals and dispensaries. 520 cases were treated during the year 1935 of which 50 died. The figures for 1936 and 1937 are 400 treated, 25 deaths and 330 treated, 45 deaths respectively. Saran treated by far the largest number of snake-bite cases, a record for itself. The numbers of such cases were 152, 137 and 126 during the years 1935, 1936 and 1937 respectively and the corresponding figures for deaths are 19, 8 and 18.

Anti-venene serum and Potassium permanganate were used for treatment of snake-bite cases, separately or combined.

Statements E & D—Operation statement.

Under the head Statements C and D a review has been made of the total medical work done during the triennium. Statement E gives a consolidated detailed idea of the total amount of surgical work, including injections done in the hospitals. The total number of operations performed in all classes of hospitals and dispensaries was 331,920 in 1935, 335,103 in 1936 and 389,045 in 1937. The operations were as follows in the State Public, Local Fund, Private-aided and subsidised hospitals and dispensaries:—

1935	265,354
1936	278,492
1937	308,928

and their result in percentage was as shown below:—

Year.	Cured.	Relieved.	Discharged otherwise.	Died.	Remaining.
1935	95·17	2·71	·30	·17	1·65
1936	95·11	2·93	·31	·16	1·49
1937	93·65	2·75	·24	·17	3·19

Some of the important operations performed during the years 1936 and 1937 are reproduced below. The figures for Bihar for 1935 are inseparable from the combined Statement E for that year and they have not been taken into account.

Important operations.	1936.	1937.
Operations on tumours	1,268	1,348
Ditto Bones	6,174	6,450
Ditto Joints	1,569	1,585
Amputations	680	584
Extraction of lens	3,700	4,581
Abdominal operations	1,234	1,375
Operations for radical cure of Hernia ..	266	397
Do. strangulation of Hernia ..	126	103
Abcess of liver, etc.	43	111
Lithotomy	156	162
Litholapaxy	11	11
Obstetric operations	1,751	1,756

Statement F—Income and Expenditure—Income.

The sums provided in the Provincial Budget under the head "Civil Medical" were—

	Rs.
Previous Trienniun, 1932-34 (average for combined Bihar and Orissa).	26,00,224
1935-36 (combined Bihar and Orissa)	26,27,132
1936-37	22,18,803
1937-38	22,53,850

The table given below shows income of the State Public, Local Fund Private aided and subsidized hospitals and dispensaries from various sources during the triennium :—

Source of Income.	1932-34 average.	1935.	1936.	1937.
	Rs.	Rs.	Rs.	Rs.
Government contribution... ...	7,26,778	8,19,585	8,91,623	9,40,780
Local and Municipal Funds contribution.	13,23,370	14,00,237	13,43,582	14,67,404
Fees and contributions collected from patients, including prescription fees.	No head	59,954	55,724	66,155
Funds collected by Hospital Committee, e.g., donations, subscriptions, etc.	1,36,902	1,15,904	1,75,808	1,15,800
Miscellaneous, including interests on investments, sale of securities, etc.	1,79,353	1,32,126	1,68,421	1,52,970
Total ...	23,66,483	25,17,806	26,35,158	27,43,109

Besides such income, other sources provided these hospitals with financial help from time to time :—

(*a*) Grants from Government to district boards towards the upkeep of dispensaries, and for the provision of medical relief in rural areas,

(*b*) special equipment grant to hospitals and dispensaries,

(*c*) discretionary grants, and

(*d*) grants from the Red Cross Society.

(*a*) Grants aggregating to Rs. 2,43,060, Rs. 2,40,000 and Rs. 2,31,000 were sanctioned by Government to district boards during the years 1935, 1936 and 1937 respectively for this purpose.

(*b*) The special equipment grant given by Government for non-Government institutions during the triennium was as follows:—

					Rs.
1935-36 ..	..	..	..	..	8,000
1936-37 ..	..	..	..	..	51,200
1937-38 ..	..	..	..	..	51,200

(*c*) His Excellency the Governor of Bihar sanctioned Rs. 1,000 in 1935, Rs. 2,400 in 1936 and Rs. 11,051 in 1937, for providing various facilities in the hospitals and dispensaries in Bihar. Rs. 1 000 out of the grant given in 1937 represents the sum allotted by His Excellency to the Patna Medical College Hospital to meet the emergent expenditure in connection with treatment of persons injured in the Bihta Railway accident.

The Hon'ble Minister in charge of Local Self-Government and other Ministers, e.g., the Hon'ble Prime Minister and the Hon'ble Excise Minister distributed Rs. 4,099 in 1935, Rs. 14,878 in 1936 and Rs. 1,122 in 1937 out of their discretionary grants to the hospitals and dispensaries.

(*d*) The Indian Red Cross Society sanctioned Rs. 8,989 in 1935, Rs. 7,000 in 1936 and Rs. 6,000 in 1937 for providing comforts to the patients in the hospitals. These amounts added to the well-being of the patients.

Donations were also received from private persons and institutions during the years under report and the most important of these were :—

1935—

(1) Rs. 941 given by Babu Bindeshwari Saran, pleader of Chapra, to the Chapra sadr hospital for investment as permanent fund. The interest on this money is to be utilised for provision of special diets and medicine for patients.

(2) Rs. 500 donated by Babu Girdhar Gopal, advocate of Chapra towards the construction of the Female ward at the Siwan hospital which was already being constructed by his munificent donations of Rs. 8,501 and Rs. 500 during the years 1933 and 1931 respectively as noted in the last Triennial Report.

(3) Two charitable endowments, accruing annual incomes of Rs. 482 and Rs. 240 made by the same gentleman to the Chapra sadr hospital and Siwan subdivisional hospital respectively, for provision of special diet to the in-door patients at these hospitals.

(4) Rs. 2,000 given by the Hon'ble Raja Raghunandan Prasad Singh of Monghyr for purchase of a surgical diathermy appartus for the Monghyr hospital.

(5) Rs. 2,000 advanced by Khan Bahadur A. W. Khan of Monghyr for purchase of a Medical Diathermy apparatus at the Monghyr hospital.

(6) Rs. 1,201 given by the Proprietor of Kunda Estate for the maintenance of the Pratappur dispensary in the district of Hazaribagh.

(7) Rs. 1,600 advanced by the Dublin University Mission brotherhood towards the pay of a Woman Sub-Assistant Surgeon at the St. Columba's Zenana Hospital, Hazaribagh.

(8) Rs. ,000 awarded by Babu Raghubans Prasad of Kursela, for construction of a Parda ward at the Purnea hospital.

(9) Rs. 1,000 donated by Rai Bahadur Moti Lal Chamaria of Katihar for construction of an Operation Room in the Katihar hospital.

(10) Rs. 1,997 given by Babu Premanand Modak of Jhalda, Manbhum for construction of a female ward in the Jhalda hospital.

(11) Rs. 1,072 provided by Rai Bahadur D. D. Thakar of Jharia for construction of two additional rooms in the existing female ward at the Dhanbad hospital.

(12) Rs. 341-9-0 from the Hazaribagh Athletic Association for improvement in the Hazaribagh Sadr Hospital.

1936—

(13) Srimati Rani Chandrabati Debi, 4 annas Banaily Estate heiress, who used to pay Rs. 3,500 every year to the Female (Rani Sibtarini) Hospital, Bhagalpur, before her death in February 1936, made a will that the interest accruing on a sum of one lakh of rupees deposited in the Imperial Bank of India, would go to this hospital.

(14) Rs. 67,000 were donated by the Ramgarh (then Wards) Estate for reconstruction of the Hazaribagh Sadr Hospital.

(15) A Cottage ward consisting of 3 blocks was constructed at the Dhanbad hospital by Rai Bahadur H. P. Banarji at a cost of Rs. 4,000.

1937—

(16) Rs. 1,20,700 were given from the Government Earthquake fund for the reconstruction of the Purnea sadr hospital; Rs. 7,500 were donated by Kumar Ramanand Singh of Banaili for construction department of the out-door of this hospital.

(17) Rs. 2,700 were donated by Babu Rambilas Singh of Bharno and Rs. 1,000 by Rai Bahadur Rameshwar Mathory towards the reconstruction of the Giridih hospital, Hazaribagh.

(18) The Maharaja of Chota Nagpur presented to the Ranchi Sadr hospital one Operation Table, one Scyalytic light and a standard lamp all worth Rs. 3,792.

(19) Rs. 1,000 and Rs. 5,000 were received from the Maharaja Bahadur of Hathwa, Saran and from the Raja of Sheohar, Muzaffarpur, respectively, towards the purchase of an X-ray plant and constrution of X-ray block at the Muzaffarpur sadr hospital.

The system of soliciting subscriptions for the hospitals and dispensaries was introduced long ago with a view to make people realise that they had some obligation towards these institutions from which they derived benefit and which it was their duty in some measure to meet. But this has never been popular. From year to year it is recorded with regret that the public have always lagged behind in this respect. While promises have been freely given, the realisation of the amounts promised has always been difficult. The system has practically failed and in many cases the subscription registers have had to be closed. As usual, the realisation of subscriptions showed no change for the better during the triennium under review. Promised amounts fell in heavy arrears almost everywhere and attempts to collect them had to be ultimately given up. Even the members of the dispensary committee are not prone to fulfil this small responsibility. The reason for this can be attributed to some small extent to the economic conditions.

The other avenue of small income—prescription fee from well-to-do patients, introduced in 1932, was not so unpopular. With the rise in the number of patients treated in the hospitals and dispensaries during the period under review, increase occurred in the amount realised from prescription fees. In some cases a fair income amounting even to a thousand rupees accrued to popular hospitals. The rates of fee are still the same, i.e., 1 anna and 6 pies respectively and are not perhaps much resented.

The following table will show the expenditure incurred under different heads in the State Public, Local Fund, Private-aided and subsidized dispensaries in the Province during the triennium under review, as compared with the previous triennium :— Statement F.—Expenditure.

Heads of expenditure.	1932—1934 (average).	1935.	1936.	1937.
	Rs.	Rs.	Rs.	Rs.
Salaries of medical officers ..	6,34,534	6,86,722	6,68,336	6,83,619
Salaries of nurses	1,18,856	1,20,655	1,30,863	1,30,483
Salaries of inferior servants ..	4,61,690	4,46,033	4,68,060	4,82,590
Medicines	4,17,731	4,36,097	4,09,833	4,71,281
Diet	1,08,063	1,46,096	1,56,538	1,57,364
Apparatus (repair or otherwise) ..	29,716	17,672	17,815	25,273
New buildings, additions, etc., to buildings and other capital expendure.	68,576	1,04,240	1,31,780	2,41,343
Repairs to buildings	90,771	1,20,056	1,09,828	1,10,033
Miscellaneous	3,26,486	3,56,485	3,87,998	4,49,830
Total ..	22,56,423	24,34,056	24,81,051	27,51,816

The above figures will show that there has been steady increase in the expenditure over hospitals and dispensaries from year to year during the triennium. The increase of cost under buildings results from the repair and reconstruction of hospital buildings at various places often considerably damaged by the 1934 earthquake. The havocs wrought by this catastrophy were recorded in the last triennial report. The important hospital buildings constructed or to be reconstructed or repaired, including those damaged by the earthquake, are as follows :—

Patna Medical College Hospital.—The damaged portions of the buildings, e.g., Women's hospital, the X-ray department, the Isolation ward, etc., were repaired during early part of 1935.

Darbhanga Medical School Hospital.—Darbhanga Medical School Hospital was irrepairably damaged in the earthquake and it had to be reconstructed. A most modern hospital with increased bed capacity was constructed at a cost of about 7½ lakhs of rupees by the close of the triennium and has since been opened by Lady Hallett, wife of His Excellency, the Governor of this province.

Patna City Hospital.—The female ward was demolished and a bigger building with greater accommodation was reconstructed.

Bettiah King Edward Memorial Hospital.—A new building on mordern and generous lines was constructed at a cost of six lakhs of rupees.

Muzaffarpur Sadr Hospital.—Extensive earthquake repairs were carried out in this hospital. A maternity and labour ward with 17 beds was added to the hospital from the King Emperor's Silver Jubilee Fund grant.

Sitamarhi Hospital.—This hospital was also very greatly damaged. The work has been carried on in the old buildings with patchwork repairs. Scheme for reconstruction of the hospital at a separate site was under the consideration of Government.

Madhubani Hospital.—A new hospital was constructed at the Bhaura site.

Dumra.—A new outdoor dispensary was constructed by Government at Dumra where the official headquarters of Sitamarhi subdivision in Muzaffarpur district were shifted.

Motihari Sadr Hospital.—This hospital was almost completely damaged by the earthquake and its reconstruction became necessary. During the triennium a site was selected for it at the Gopalpur site where the other Government court buildings of Motihari were shifted. Plans and estimates have been approved. The reconstruction work had not begun till the close of the triennium.

Hazaribagh Sadr Hospital.—The old buildings had become much dilapidated and unserviceable. The construction of a new and bigger hospital was taken up in 1936 and the work progressed satisfactorily to the close of the last year of the triennium. The Ramgarh Estate contributed Rs. 67,000 for construction of the new hospital.

Purnea Sadr Hospital.—There is a proposal to reconstruct this hospital but the project has not made much progress.

A review of the report on the working of the Municipalities and District Boards indicates that they spent perhaps not an unsatisfactory portion of their revenue in the provision of medical relief. The District Boards' contributions towards the headquarters, Sadr and Subdivisional hospitals, however, were not adequate in most cases and Government were approached from time to time for assistance.

Statement G.—Invested capital.

The hospitals and dispensaries in the province had little to invest during the years under report and the various investment statements merely repeat the amounts invested long ago, and carried forward from year to year. Besides this only the Local Fund and Private-aided Hospitals have some money to invest and their total invested capital at the end of the triennium (i. e. 1937)

was Rs. 14,32,656 as compared with Rs. 14,20,257 at the end of the previous triennium (1934). The amount of investments during the three years were Rs. 21,358 in 1935, Rs. 8,292 in 1936 and Rs. 17,021 in 1937 and the amount of securities sold and deposits withdrawn amounted to Rs. 25,200, Rs. 4,768 and Rs. 4,304 during the corresponding years of the triennium. Of these the highest figures stood at the credit of Monghyr Sadr Hospital (Rs. 10,400 in 1935), Purnea Sadr Hospital (Rs. 7,400 in 1935), Purulia Sadr Hospital (Rs. 1,917 in 1935 and Rs. 2,675 in 1936) and Arrah Sadr Hospital (Rs. 1,825 in 1936 and Rs. 14,613 in 1937).

Appendix I and statement C. Distribution of patients according to sexes and classes.

The distribution of patients in the State-Public, Local Fund, Private-aided and subsidised hospitals and dispensaries according to classes, i. e., communities was 5,648 and 4,167 Europeans and Anglo-Indians, 4,087,318 and 4,549,674 Hindus, 1,091,121 and 1,210,682 Muhammadans, and 91,805 and 111,105 others (unspecified communities) during the years 1936 and 1937, respectively. Corresponding figures for 1935 are inseparable from the combined report for Bihar and Orissa for 1935.

Postmortem Examination.

Autopsies for medico-legal purposes are usually done by Civil Surgeons at the headquarters hospitals and by Assistant Surgeons and Sub-Assistant Surgeons at Subdivisional hospitals and at such centres (hospitals or dispensaries) as have been especially recognized (Jagdishpur, Koderma, Lohardaga, Garhwa, Ghatshila) respectively continued during the Triennium. The postmortem examinations were sometimes performed by the Assistant Surgeons at Sadr hospitals when the Civil Surgeon was either temporarily absent from the station or was engaged in some other important work. The postmortem examinations at Darbhanga are, however, performed by the Teacher of Medical Jurisprudence, Darbhanga Medical School and those at Patna by the Assistant to the Civil Surgeon who is the doctor-in-charge of the Police Hospital and also the lecturer in Jurisprudence at the Patna Medical College. The figures for autopsies performed during the three years of triennium are as follows :—

—	By Civil Surgeon.	By Assistant Surgeon when Civil Surgeon is in station	By Assistant Surgeons and Sub-assistant Surgeons in subdivisions or centres.	At Darbhanga.	At Patna.
1935	413	103	972	28	49
1936	449	81	969	27	34
1937	411	75	866	26	46

The amount of medico-legal work other than postmortems during the period under review was 11,354 in 1935, 13,663 in 1936 and 11,296 in 1937.

Materials requiring chemical or other examinations continued to be sent to the Chemical Examiner, Bengal, during the triennium. The charge for examination per article was Rs. 12 and the total amount paid to Bengal Government on this examination was Rs. 20,316 in 1935-36 (combined for Bihar and Orissa) and Rs. 25,476 and Rs. 20,316 during 1936-37 and 1937-38 respectively. No separate Chemical Examiner was appointed for Bihar. In 1936 the local Government examined the question of medico-legal analysis for this province and decided that all cases of medico-legal analysis out of the scope of the Chemical Examiner, Bengal, should be done by the Bacteriologist, Bihar, who will be the Chemical Examiner, Bihar, within the meaning of the Section 510 of the Criminal Procedure Code and his written report will be ordinarily accepted in evidence without necessitating his personal appearance in the court. This has been done only because he is

also the Professor of Pathology, Patna Medical College. The cases generally to be examined by the Bacteriologist are—

(1) Bacteriological investigation of materials from human individuals for common pathogenic organisms only and (2) Micro-section examination of tissues from human body for pathological lesions.

Medical Education. Prince of Wales Medical College, Patna.

The College has been in existence for the past 12 years and during this period has developed to become one of the best Medical Colleges in India. There has been many changes in the staff during the triennium important of which are as follows :—

(1) Lt.-Col. A. N. Bose, I.M.S., officiated as Principal from 1st January 1935 to 8th October 1935, after which Lt.-Col. G. H. Mahony took charge and continued till the end of the triennium.

(2) Lt.-Col. H. G. Alexander, I.M.S., Professor of Surgery went on leave ex-India preparatory to retirement and Major D. P. Bhargava, I.M.S., succeeded him.

(3) Dr. Hyder Ali Khan, Professor of Anatomy engaged on contract, resigned his post in July 1935 and was succeeded by Civil Assistant Surgeon Dr. Sanatan Pujary, who has since been confirmed.

(4) On the expiry of the contract of Dr. R. K. Pal, Professor of Physiology, Civil Assistant Surgeon Dr. B. Narayan, who had specially qualified in Physiology in Great Britian and had obtained the Ph. D. in this subject was appointed Professor of Physiology.

(5) A special chair of Opthalmology was created and Civil Assistant Surgeon Dr. M. Husnain was made the Professor of Ophthalmology and Otorhino-laryngology. The duties of lecturer in Ophthalmology were taken over by Dr. D. Ram, D.O.M.S., who had specially qualified in England in the treatment of diseases of Eyes, Ear, Nose and Throat.

(6) The term of Civil Assistant Surgeon Dr. P. C. Ray, Professor of Pharmacology expired on 31st December 1937 and Civil Assistant Surgeon Dr. B. N. Prasad, M. B., M. SC., Ph. D., was appointed Professor of Pharmacology, from the 1st January 1938.

(7) Dr. K. N. Bagchi, the lecturer in Organic Chemistry went to Calcutta as Chemical Examiner of Bengal Government and Dr. T. N. Seth, Lecturer in Biochemistry was appointed in his place.

(8) Mr. S. S. Chaudhury, Professor of Biology, and Mr. N. M. Rudra, Demonstrator of Chemistry were confirmed in their appointments.

(9) The contract of Rai Bahadur Dr. T. N. Banarji, Professor of Medicine was renewed in December 1936, for a period of 5 years.

This college admits 40 students to the first year class every year. In special circumstances, e.g., in the case of women candidates, this rule is relaxed. In 1936-37 two women students were admitted into the college with the special sanction of Government and this practice has been allowed to continue. A special scholarship of Rs. 250 a year was awarded by Government to one of the female students of this college in 1937.

Since the separation of Orissa, the candidates from that province are selected by the Director of Health and Inspector-General of Prisons, Orissa.

Ninty-two students appeared in the Final M.B., B.S., examination of the Patna University in 1935 of whom 36 were successful. The corresponding figures for the years 1936 and 1937 are 88 appeared and 39 passed, and 70 appeared and 37 passed respectively. The results of the final and other university examinations have been satisfactory and the percentage of passes has risen. The total number of students in the college was 267, 266 and 260 and average daily attendance was 219·6, 231·0 and 221 in sessions 1935-36, 1936-37 and 1937-38 respectively.

A majority of the students lived in the college hostel but many had to remain outside, either with their guardians or in recognised hostels for want of sufficient hostel accommodation. A scheme to construct a hostel sufficient to accommodate all the students, with a separate hostel for the female students is under the consideration of Government.

It was already reported in the last triennial report that the name of Patna Medical College has been included in the schedule of the Indian Medical Council Act of 1933. In 1935 a Committee composed of Sir Kedar Nath Das, Dr. Tirodkar and Mr. Farquhar Macrae, sent by the Medical Council of India, visited the college and reported favourably on the medical curriculum and the standard of examinations followed in it. The M.B., B.S., degree of the Patna University has now been recognised by the General Medical Council of Great Britain with effect from 1st May 1935.

The General Medidal Council of Great Britain as the result of a Conference of Experts have made a number of important changes in the medical education and on the recommendation of the Medical Council of India on these changes, a Committee of the Medical Faculty of the Patna University is engaged at present in drawing up a new curriculum for the Patna Medical College.

Some lady students of this province were also admitted at the recommendation of the Local Government in the Lady Hardinge Medical College, Delhi and were awarded scholarships for study there.

Medical Education (Darbhanga Medical School.)

The Darbhanga Medical School worked well throughout under the efficient supervision of Lt.-Col. J. C. John, O.B.E., I.M.S. In all 600 students were admitted and trained in this school during the years 1935 to 1937 and 118 left the school after passing the final L. M. P. examination of the Bihar and Orissa Medical Examination Board. An all round improvement was brought about in the teaching of the school as well as in the educational status of the students admitted. The minimum qualification for admission of students was fixed to second division matriculation of the Patna University and first division in the case of other Universities. Inspite of this, there was a great rush of candidates of even higher qualifications for admission in the school.

The system of appointing examiners from amongst Civil Surgeons has been discontinued and members of the highly specialized teaching and examining staff of the Prince of Wales Medical College, Patna, have been appointed as examiners of the Bihar and Orissa Medical Examination Board. This has raised the standard of examinations and has at the same time given impetus to learning among the students.

This school also trains and examines compounders. This training is open to non-matrics only but recently a large number of matriculates are also taking admission into the compounders' class. It is expected that in a short time the system of competitive examination for non-matrics for admission in compounder class will be discontinued.

Treatment of Mental defectives, Ranchi European Mental Hospital.

The Ranchi European Mental Hospital is situated at Kanke six miles from Ranchi. It continued to function satisfactorily under the efficient supervision of the Medical Superintendent, Major M. Taylor, I.M.S., who remained in charge except for one year when he was absent on leave ex-India from 25th September 1936, from the beginning of the triennium to the end of it. During his leave Captain W. W. Laughland, I.M.S., officiated for him.

The European Mental Hospital is intended for sufferers from nervous and Mental diseases (including chronic alchoholism and drug habits) who are by birth Europeans, Anglo-Indians or Americans and resident in Bengal, the United Provinces, Assam, the Punjab, the Central Provinces and Berar, Baluchistan and Bihar and Orissa. It also admits such patients transferred from other provinces or Native States provided the Government of those provinces and States agree to bear the proportionate cost of maintenance of such patients and Government of Bihar concur in their admission. The bed capacity was previously 218 but it was increased to 296 in 1936. Ten of these beds are available for Indian paying-patients with European habits. Voluntary patients may also be admitted.

All modern methods of treatment including shocktherapy, hydrotherapy, occupational therapy, psychotherapy, diversion therapy, etc., are carried out.

The statement given below shows the number of patients treated during the years 1935—38 and the result of treatment.

—		1935.	1936.	1937.
1. Average population		206·75	219·48	230·13
2. New admission (including readmissions) ..		58	51	53
3. Discharged cured ..	Total ..	23	19	26
	Percentage ..	11·08	8·61	11·15
4. Deaths	Total ..	9	5	9
	Percentage ..	4·23	2·28	4·05
5. Cost per head exclusive of Public Works Department charges.		Rs. 1,314	Rs. 1,296	Rs. 1,218

Post-graduate courses in psychiatry and mental hospitals administration are carried out in winter months, if sufficient number of candidates offer themselves for training. During the years 1935—37 three State Medical Officers, two from Nepal and one from Bhopal, attended Post-graduate course of training in psychiatry and mental diseases at this hospital.

This hospital is recognised as a teaching school for Diploma in psychological medicine of the London University and other schools and also by the Royal Medico-Psychological Association for the certificate of Proficiency in Mental Nursing. The examinations for the Certificate of Proficiency in Mental Nursing granted by the Royal Medico-Psychological Association of Great Britain and Ireland were conducted in India for the first time at this hospital in May 1936. Eight nursing sisters appeared at the final examination and three members of the staff at the preliminary examination.

Ranchi Indian Mental Hospital.

The Ranchi Indian Mental Hospital worked satisfactorily under the efficient supervision of Lt.-Col. J. E. Dhunjibhoy, I.M.S., all throughout the triennium except for few months in 1935-36, when he went on leave ex-India, during which period Dr. J. N. J. Pacheco, I.M.D., the then Deputy Superintendent of Ranchi European Mental Hospital officiated for him. The accommodation of 1,014 males and 272 female beds in the hospital was increased by 44 more male beds in 1936.

The high standard of efficiency for which the hospital has been famous since its inception, was maintained throughout. Lt.-Col. Dhunjibhoy with the help of valuable knowledge acquired by his European tour during the year 1936 effected the successful improvements in methods of treatment and control. Occupational therapy and Cardiazol treatment, may be quoted as outstanding examples.

The table reproduced below shows the number of patients treated with results :—

—		1935.	1936.	1937.
1. Average population		1288·52	1307·84	1322·93
2. New admissions (including readmissions) ..		145	147	154
3. Discharged cured ..	Total ..	65	75	84
	Percentage ..	5·04	5·73	6·35
4. Deaths	Total ..	45	33	39
	Percentage ..	4·56	2·38	3·13
5. Cost per head exclusive of Public Works Department charges.		Rs. a. p. 326 13 4	Rs. a. p. 327 5 4	Rs. a. p. 331 0 4

The students of the Patna Medical College attended lectures on Psychiatry delivered by the Superintendent in two batches in every year of the Triennium.

An important change took place in the administrative arrangements during 1935. Three medical officers, one Assistant Surgeon and two Sub-Assistant Surgeons were deputed by Bengal Government on the staff of the Indian Mental Hospital and similar number of officers were withdrawn by the local Government. The reason for doing so was that Bengal contributes 75 per cent of the total expenditure of the Indian Mental Hospital and they had no officer of their own till then on the staff of the Indian Mental Hospital. The term of these officers is two years as is the case with the officers of this province.

The Indian Mental Hospital was recognised in 1936 for Post-Graduate study for the Diploma in Psychological Medicine of the Universities of London and Edinburgh.

Situated at the height of about 2,350 feet in the pleasant surroundings of the Ranchi Plateau, the Itki Sanatorium had been in operation for 9 years by the close of the Triennium. The Sanatorium is 16 miles to the west of Ranchi town and within a distance of half mile of the Itki Railway station. The grounds cover an area of about 270 acres in a pure atmosphere, free from dust, noise and smoke. **Itki Sanatorium.**

The Sanatorium affords treatment for the persons suffering from Tuberculosis in the province. Under the efficient supervision of Dr. D. V. Gnanmuthu, it's excellent work was continued. Dr. Muthu was throughout in-charge except for 10 months in 1935-36 when he was on leave and his assistant Dr. J. P. Sinha, Civil Assistant Surgeon, officiated for him. The demand for accommodation in the Itki Sanatorium has been considerable and more than could be met by the 66 beds which exist at present. A forecast for an extension of the Sanatorium was made in the last triennial Report. In accordance with that scheme 31 " B " wards with 62 beds have been sanctioned, but only 10 wards with 20 beds were opened by the end of 1937. The total bed capacity has thus increased from 66 to 128. To facilitate the working of these extra wards extra nursing and other staff and equipment have been sanctioned. A Sub-Assistant Surgeon specially trained at the Patna Medical College in Pathological work has been deputed to the Sanatorium and appointment of another is under contemplation.

The medical work of the Sanatorium is given in the statement given below :—

Year.	Number of admissions.	Total number treated.	Number of discharge.	Arrested	Much improved.	Improved.	Number of discharge otherwise.
1	2	3	4	5	6	7	8
1935 ..	132	174	115	16	49	15	35
1936 ..	126	185	120	12	32	21	55
1937 ..	139	229	114	11	37	25	41

The figures indicate that many cases come in an advanced stage too late to receive the full benefits of Sanatorium treatment.

A course of 6 lectures was given to each of two batches of students of the Prince of Wales Medical College during each year of the Triennium. The students remained at Itki for about a week and learnt the modern methods in the diagnosis and treatment of Tuberculosis.

Two beds have been reserved in the Sanatorium for patients from Orissa since that province was separated in 1936 and a contribution is realised for this purpose.

Radium Institute. The Radium Institute completed the 16th year of its existence at the end of the Triennium, of which the last 10 years have been at Patna. Dr. B. K. Ray, M.B., D.M.R.E., was its superintendent all throughout, except for a few months in 1936, when Dr. S. K. Sahay, M.B., D.M.R.E., Radiologist, Patna Medical College Hospital held the charge of the institute in addition to his own duties. The Superintendent is helped by a lady doctor, who looks after the female patients and by a House Surgeon. The institute treated patients from all India. Its work has been steadily and progressively increasing. The total number of new cases treated in 1935, 1936, and 1937 was 812,859 and 945 respectively. Of these 130 cases in 1935, 167 in 1936 and 190 in 1937 became clinically free from all signs and symptoms. There was no change in the accommodation which remained as before eighteen, 12 males and 6 females. In addition to a set of cabins for ordinary patients there is also a separate set of well equipped family quarters for the Indians and accommodation for Europeans in the Wheeler ward of the Patna Medical College Hospital. The total amount of Radium fee collected in 1935 was Rs. 8,121, in 1936 Rs. 8,545 and in 1937 Rs. 8,930.

In his report of 1936 Dr. Roy observed that "of the total cases of cancer treated in nearly half the disease was inside the mouth. The habit of constantly chewing pan (betal leaf) with lime and tobacco and keeping the chewed mass in the mouth against the cheek is responsible for a large majority of cases of the cancer of cheek. This habit of pan-eating which is almost universal throughout India and is largely prevalent amongst certain classes of people, specially women, is responsible for a large group of cases of cancer ..."

"The habit of Khaini (i.e., keeping a quantity of powdered tobacco leaf mixed with lime in the inner side of the lower lip) is another habit responsible for the production of a large number of cases of cancer of the lip and the jaw. This practice is widely prevalent amongst the poorer classes of people in Bihar and other places and is indulged in from a very young age ...."

"The disease very often starts as a small painless ulcer and is thought to be an ordinary lime burn and no serious attention is bestowed upon it. Once formed nothing, however, seems to be able to check it and it goes on progessively increasing and by the time its real nature is known it has very often seriously involved other parts ......"

These facts are highly instructive, for the obvious means of prevention is easy.

Pasteur Institute. Anti-rabic treatment. The Pasteur Institute at Patna completed the 9th year of its existence at the close of the year 1937. As usual it remained under the charge of a Civil Assistant Surgeon specially trained in the anti-rabic treatment work and worked throughout satisfactorily. Up to March 1936, the Pasteur Institute was working conjointly with the Anti-Rabic Centre at Cuttack but on the separation of Orissa the Cuttack centre was also separated and the supply of vaccine, which was previously free to Cuttack, is now made on payment at Rs. 3 per treatment of 75 c. c. excluding packing and transit charges.

A further development in the work of Pasteur Institute was the introduction of scheme of decentralization of anti-rabic treatment throughout the province, which Government approved in 1936. Anti-rabic Centres can be opened at various important hospitals such as Sadr and Subdivisional hospitals, where arrangements for cold storage of vaccine can be made. The vaccine is manufactured and supplied by the Patna Pasteur Institute free of cost to all the recognised centres but the managing authorities of the hospitals are required to pay the cost of packing and transit. The scheme materialised in the latter part of the triennium and anti-rabic Centres were opened at Darbhanga, Bettiah, Bhagalpur, Ranchi, Monghyr, Jamshedpur and Dhanbad by the end of 1937. The question of levy of fees from the well-to-do patients receiving treatment at these centres is under consideration. Nine Medical Officers were given training in anti-rabic treatment in 1937 for carrying on the work at the above centres. Civil Assistant Surgeons who attend the Post Graduate Course at the Patna Medical College Hospital also receive a fifteen days' training in the anti-rabic technique since 1930. So far, 12 Civil Assistant Surgeons of Bihar and four of Orissa have been thus trained.

4,931 patients were treated at the Pasteur Institute in 1935 and 5,092 and 3,499 in 1936 and 1937, respectively. The decrease in the number of patients treated in 1937 is evidently due to the fact that many cases were treated at the anti-rabic centres of their districts. Of these 3,920, 4,075 and 2,824 completed treatment and were cured in the year 1935, 1936 and 1937, respectively. 200,822·90 c. cs. of 2 per cent and 92,659 c. cs. of 5 per cent vaccines were manufactured in 1935 at Patna Pasteur Institute and the corresponding figures for 1936 and 1937 were 325,312·56 c. cs. of 2 per cent and 87 ,236·88 c. cs. of 5 per cent.

As usual indigenous patients were accommodated in houses hired for the purpose near the Institute and each was paid annas four per day during his stay at Patna for treatment. The houses were maintained by the Patna City municipality by grants from Government.

In view of the concessions withdrawn in 1932 by the Railway authorities of issuing free passes to patients coming for mufassil for anti-rabic treatment, the local Government decided in 1937 that "in respect of such patients coming from the jurisdiction of district boards all expenditure in connection with their treatment should be borne by the district boards themselves and in case of those coming from municipal areas or from notified areas and areas under the District Committee of the Santal Parganas, the expenditure will be met by Government ". No doubt, this has put some strain on the resources of the district boards as well as Government but with the opening of sufficient number of anti-rabic centres throughout the province, this expenditure will be reduced.

The Patna Medical College Council has resolved that from 1938 senior students of the College will have lectures and practical demonstrations in rabies and anti-rabic technique.

St. John Ambulance Association.

Although a centre of the St. John Ambulance Association, Indian Branch, existed in the province since a long time (1913), its activities during the recent years were more or less dormant. This Association was moribund during the triennium. Few attempts had been made to educate the people in the humanitarian principles of the Association, to teach them what to do in accidents and emergencies before a doctor arrived, and above all to teach them the elements of the cause of disease, of how to prevent common infections which abound everywhere in Bihar and to teach them the necessity of fresh air, sanitation, hygiene, cleanliness and healthy living. Some first-aid and ambulance instruction among the students of the Government schools and cadets in the Police training institutions has, however, been carried out for the past few years.

In November and December 1937, it was decided to endeavour to re-start the work of the Association mainly through the Bihar Medical Profession so that all people who so desired would have an opportunity of learning how to improve their health by avoiding infections and by First-Aid Treatment. The Bihar medical profession has nobly responded and has undertaken to give honorary instruction to the people.

Details of the revised programme which were planned for 1938, go beyond this review. A general outline of what has been proposed together with a short history and principles of the St. John Ambulance Association follows. Even since its origin, some 800 years ago the aims of workers in the St. John Ambulance has been to instruct people—

(1) in rendering first-aid in accidents or sudden illness ;

(2) in the transport of the sick and injured to safety ;

(3) in the elements of nursing ;

(4) in the elements of ventilation, sanitation and in the prevention of diseases,

(5) in organising Ambulance and Nursing units for the above purposes ;

(6) to promote work for the relief of suffering of the sick and injured in peace or in war, independently of class, nationality or denomination.

The main functions of the St. John Ambulance Association thus come under two heads—protective and preventive. The protective side embraces those emergent duties undertaken to protect or give first-aid to the victims of disasters such as floods, earthquakes, famines, fires, serious accidents like railway or motor disasters, air raids, etc. The preventive sides cover the prevention of the spread of disease. The former is carried out by training willing persons in the first principles of first-aid work, and the latter by teaching them that all the diseases are preventable, provided proper sanitary and prophylactic cares are taken in time. For this purpose a general knowledge of the cause of spread of diseases and also the knowledge of "Home Nursing" is required.

To operate this scheme it is proposed (1) to open or reactivate the moribund local centres in the 16 districts of the province with a District President, an Honorary Treasurer and an Honorary Secretary in each, (2) to give lectures and practical demonstrations for the St. John Ambulance certificate in first-aid at the Medical school and Medical college and at other educational institutions ; also in mines, factories, and to the general public, (3) similar lectures and demonstrations for nurses and other women who desire to join and (4) to form Ambulance and Nursing divisions of those holding the First-Aid and Nursing certificates. The scheme outlined above is expected to mature. Considerable interest has already been aroused, and the work has the written and personal support of His Excellency the Governor, who is President, of the Hon'ble Mr. Sri Krishna Sinha, Prime Minister, of the Hon'ble Mr. Anugrah Naryan Sinha, Minister, Finance and Local Self-Government, the Hon'ble Dr. Syed Mahmud, Education Minister and the Hon'ble Mr. Jaglal Chaudhury, Public Health Minister.

Nurses, midwives and dais.

Nurses and midwives are trained in the Patna Medical College Hospital, Darbhanga Medical School Hospital, Duchess of Teck Zenana Hospital, Patna, Lady Elgin Zenana Hospital, Gaya and other hospitals with adequately trained and registered nurses. In the four institutions named above Anglo-Indian and Indian nurses and midwives are trained for a three-year course in General Nursing and Midwifery, but in the other hospitals Indian nurses only are trained. During the triennium the training was imparted in accordance with the syllabus prescribed by the local Government and examinations were conducted by the Bihar Medical Examination Board twice a year. As usual, it was not easy to find good material for training nurses and midwives.

The system of training *dais* according to the syllabus of the Central Victoria Memorial Scholarships Fund, continued in several hospitals specially recognised for the purpose and Maternity and Child Welfare Centres. Usually illiterate and ignorant village *chamains*, who are hereditary indigenous *dais*, attended the course. They were generally given an allowance of Rs. 12 per month but in many cases, it has not been more than Rs. 5 depending on local conditions. The Victoria Memorial Scholarships Fund expenditure on training of these dais was Rs. 4,410 in 1935, Rs. 5,842 in 1936 and Rs. 5,171 in 1937.

Except for a few hospitals there has always been insufficient nurses in the hospitals in this province. This is a question due partly of adequate supply and partly financial. There were midwives or *dais* employed in almost all the headquarters hospitals and some subdivisional hospitals also, but their work was confined only to the towns. The vast number of women in villages had still to be delivered by the indigenous midwife-*chamains*.

The Bihar and Orissa Nurses Registration Act was passed in 1935 by the local legislature. A reference of the principles on which it was to work has been made in the last Triennial Report, but did not operate during the triennium under review. Rules and regulations were framed under this Act and they have since been approved by the local Government. The Registration of Nurses and Midwives will begin from 1938. The number of nurses and midwives who passed the Board's examination under Nurses Registration Act is given under the head Medical Board and Council.

Maternity and Child Welfare.

The Maternity and Child Welfare Society completed 10th year of its useful existence by the end of the triennium. It is controlled by a Managing Committee consisting of a President, the wife of the Governor, two *ex-officio* members, the Inspector-General of Civil Hospitals, and Director of Public Health, two members nominated by the Governor and seven members co-opted by the other members for a period of two years at a time. The Inspector-General of Civil Hospitals is the Secretary and Accountant-General, the Honorary Treasurer of the Society.

The work of the Society was carried through various centres. In 1936, after the separation of Orissa, two of the Maternity Centres situated there were transferred and placed under a local society. The centres in Bihar numbered only five, i.e., three at Patna, one at Monghyr and one at Muzaffarpur. A Maternity Centre was opened in Ranchi in 1936 which it is hoped will be known as the Lady Hallett Centre. Two other centres were opened at Jamshedpur and Jugsalai in the district of Singhbhum. The total number of centres at the end of the triennium was eight.

The income of the society during the years under review amounted to Rs. 14,747 in 1935, Rs. 15,331 in 1936 and Rs. 12,273 in 1937. It consisted of interest received for various trust funds, from fixed deposits, Government securities, as well as a regular annual grant of Rs. 9,000 from Government. Lady Sifton, the then President of the Society, created two trust funds one at Patna in 1936 for maintenance of the Maternity and Child Welfare Centre in Patna West and the other at Monghyr in 1937 for maintenance of the Centre there. These funds are invested in Government securities and yield annual incomes of Rs. 2,522 and Rs. 1,400 respectively.

The expenditure incurred by the Society for the maintenance, etc., of the centres, including other charges, was Rs. 8,238 in 1935, Rs. 10,272 in 1936 and Rs. 15,780 in 1937. The excess of expenditure during 1937 was met by the opening balance of Rs. 5,576.

The Midwifery Centres opened by local bodies, district board and municipalities and by Government at various places, i.e., in Patna, Purulia, Darbhanga, Doranda and Gardanibagh (Patna) carried out excellent work during the triennium. The midwifery centres opened by Government in Patna are six in number. The work carried out by them as well as by the centre at Gardanibagh, Patna Administration Committee area continued as before under the supervision of a Maternity Supervisor appointed by Government. The midwives of Government Centres attended to a large number of confinement cases at the patients' homes and also sent many of them to the Patna Medical College Hospital. The Maternity Supervisor worked in close co-operation with the Child Welfare Centres at Patna. The Midwifery Centres in the coal mines area under the Jharia Mines Board of Health also did excellent work.

The Maternity and Child Welfare work in the province during the triennium did not make much progress. It has not yet gained the interest of the general public nor of the authorities in charge of rural administration. The reason for this may be attributed to (1) remoteness of the village people from suitable places where midwifery centres are or can be maintained, (2) lack of funds, (3) poverty of the villagers who cannot afford journeys to centres, (4) their general ignorance and illiteracy, which limits their outlook to their own surroundings and daily routine of life. Consequently they pay little heed to questions of health and hygiene and it is difficult to convince them of the need of such essentials as child-welfare, and of cleanly midwifery.

Medical Aid to women.

As noted under the comments on statements C and D—number of patients treated in hospitals and dispensaries—it would appear that the hospitals are gaining popularity with the women folks, since the number of female patients has greatly increased during the triennium. Not to speak of only outdoor cases, women patients are now resorting to hospitals in labour cases also with less reluctance. There was, however, not very much change in

the policy and procedure of providing capable medical aid to Purdah women in this province. The number of separate hospitals for women remained the same as enumerated during the last triennium, i.e., female hospitals were available only at places like Patna, Gaya, Ranchi, Monghyr, Bettiah, Bhagalpur, Hazaribrgh and Chakradharpur. There were Lady Doctors attached to almost all the sadr and subdivisional hospitals. In order to guarantee the facility of providing uninterrupted female medical aid at the sadr and subdivisional headquarters stations, a special lady medical officer has been entertained at the Patna Medical College Hospital whose duty is to act for the lady doctors of the hospitals at these places when they proceed on leave, etc. For this purpose contribution is realised by Government, from the local bodies in respect of travelling allowance at 2nd class rate and a deputation allowance at Rs. 2 per day of the lady doctor only. The lady doctor attached to the Darbhanga Medical School Hospital held a graduate's qualification and in 1936 with a view to provide better medical aid to Purdah women a lady doctor of similar qualification was appointed at the Patna Medical College Hospital also. She will also be replaced by another highly qualified lady doctor. The position regarding medical aid to women in remote interior villages remains unchanged.

The Bihar and Orissa branch of Countess of Dufferin Fund, which is an important organisation for looking after the welfare of women, worked satisfactorily all throughout the triennium. The fund spent Rs. 21,258, Rs. 1,02,138 and Rs. 18,447 during the years 1935, 1936 and 1937 respectively for maintenance of lady doctors, nurses in sadr and subdivisional hospitals, Child Welfare Centres, etc. The large expenditure in 1936 in the Countess of Dufferin Fund was due to the fact that a sum of Rs. 2,97,085 was received by the Fund as share of the province of Bihar and Orissa from the Silver Jubilee Fund. Rs. 44,562 out of this was made over to Orissa, Rs 1,70,000 was invested and Rs. 82,523 was distributed in grants in addition to the usual annual allotments.

The Bihar and Orissa Medical Examination Board.

The Bihar and Orissa Medical Examination Board held examination twice a year to examine candidates for the license of the Board. The statement below gives details of these examinations.

Date of examinations.	Number of students from Darbhanga Medical School.		Number of students from Orissa Medical School.		Total number of students.		Percentage of passes.
	Appeared.	Passed.	Appeared.	Passed.	Appeared.	Passed.

November, 1937 ...	2	2	9	9	11	11	Cent per cent.
Total ...	24	16	60	46	84	62	73·8

The Civil Surgeons, Professors and Lecturers of the Medical College Patna, were appointed by the Board for the conduct of these examinations. For Nurses (Anglo-Indians and Indians), an Assistant Surgeon and a Nursing Sister were appointed to conduct the examinations. The scheme for higher examinations of licentiates sanctioned by Government has not yet been started as an experimental measure at the Darbhanga Medical School.

Bihar Council of Medical Registration.

Meetings of the Provincial Council of Medical Registration were held once in each year. At the end of 1934 the number of medical practitioners on the Provincial Register was 2,664 and at the end of 1937 this increased to 3,114.

The following cases were considered by the Council during the years under report :—

(1) Against a registered medical practitioner in connection with a cable sent by him inviting a German national to come to India as Director of a new Radio Clinic at Patna. The Council after considering the merits of the case issued warnings to the practitioner.

(2) Against a registered medical practitioner in connection with a medical certificate granted by him. As there was no evidence of improper conduct the charge was withdrawn.

(3) Against a registered medical practitioner for examining a student of the Government Ayurvedic School in Pathology. The Council did not think it proper to take any action against him and accepted his explanation. The Council further were of opinion that there is no objection to the registered medical practitioners examining the subjects such as Anatomy, Physiology, Chemistry and Biology in a school or college of indigenous medicines.

(4) The recommendations of the Sub-Committee appointed by the Council to deal with the question of laying down a minimum standard of qualification for purposes of registration in this Province were accepted. They were of opinion that it is desirable to extend the course of study at the Medical School from 4 to 5 years and that Biology and Elementary Organic Chemistry shall be included in the first year of the curriculum. This question is still under the consideration of Government through the Inspector-General of Civil Hospitals.

Bihar Nurses Registration Council.

In 1935 the Bihar and Orissa Nurses Registration Act was passed by the Local Legislature. Two meetings of the Nurses Registration Council constituted under the Act were held during the years under report, in which the by-laws framed under the Act were sanctioned by the Council.

Bihta Railway Derailment Accident.

The tragic railway accident at Bihta which took a heavy toll of human life is an important event of the triennium under review. This accident took place about at 3 A.M. of 17th July 1937, when the Lahore Express passing over a nullah near the Bihta Railway station got derailed. A number of bogies were thrown overbridge and were completely smashed. 106 passengers are reported to have immediately been killed and a good number injured.

As soon as the news of the accident was communicated to the Superintendent, Patna Medical College Hospital through the Congress office at Sadaquat Ashram, he took immediate action. Two units of doctors, house staff and the students of the Patna Medical College were formed and left at once on lorries with the Ambulance car, to render first-aid. They reached there by 8 A.M. Meanwhile the railway authorities had arranged to remove the injured and the dead from the scene of accident to the Patna Junction Railway station. From midday the first patients arrived at the Patna Medical College Hospital. Some were directed to the Dinapore Railway hospital and the Dinapore Subdivisional hospital.

Ninety-five injured persons were received in the Patna Medical College Hospital. The Superintendent at once prepared the requisite number of beds in the surgical section and in the Eye Department of the hospital by transferring patients to the "Seasonal Wards" by discharging those fit to leave and by sending curables to their homes with plaster. Every case was given anti-Tetanic serum on arrival in the hospital. A note of the property, home, address, injuries and general condition of the patients was made. Four of the injured had had amputations and 44 operations had to be performed. Five of the injured died before receiving any treatment and five more died after admission from the severity of their injuries. The total number cured and discharged was 85.

The sudden call on the resources of the Patna Medical College Hospital threw a considerable strain on the staff and on resources of the hospital, which was met in a most satisfactory manner. The staff worked untiringly by day and night, and fully deserved the gratitude of the patients and of the public which was undoubtedly theirs. Additional nursing and menial staff had to be engaged. Ten nurses were supplied by the Indian Red Cross Society. Every possible comfort was provided for the patients. The extra expenditure incurred in connection with the treatment of these patients was met entirely by the East Indian Railway and it amounted to Rs. 10,000. His Excellency Sir Hallett, the Governor of the province had advanced a sum of Rs. 1,000 from his discretionary grant to meet emergencies, but it was ultimately recouped from the railway grant and utilised elsewhere in the hospital.

The hospital was visited by His Excellency the Viceroy, His Excellency the Governor of Bihar, the Hon'ble Ministers, the Agent, East Indian Railway and many public men, who commended the zeal and care with which the injured were being attended to by the staff. In recording his appreciation of the excellent work done by the staff of the Patna Medical College and Patna Medical College Hospital, His Excellency Sir Maurice Hallett, Governor of Bihar, observed in a letter to Col. (now Major-General) P. S. Mills, I.M.S., the then Inspector-General of Civil Hospitals, Bihar, "It would be invidious to pick out any for special mark and I should ask you to communicate my high appreciation of the work that has been done to the whole staff of the Hospital and College from the highest to the lowest. It is a matter of great satisfaction to me that the Patna General Hospital and Patna Medical College when faced with a serious and tragic situation have done first class work".

The following officers of the Medical Department received titular and other distinctions during the years under review in recognition of the meritorious services rendered by them. **Titular and other distinctions.**

Name.	Distinction.	Year.
Major J. M. Pereira, I.M.D. (Retd.) Superintendent, Patna Medical College Hospital.	Member of the Most Excellent Order of the British Empire.	1937
Doctor Tridib Nath Banarji, Professor of Medicine, Patna Medical College.	Rai Bahadur ...	1936

Babu Paras Nath Sahay, Head clerk, Civil Surgeon's office, Gaya.	King Emperor's Silver Jubilee Medal.	1935
Sub-Assistant Surgeon Doctor Jogendra Nath Pal.	Coronation Medal ...	1937

This review of the working of hospitals and dispensaries for the years 1935-37 showed a gratifying resort to the Government Hospitals and Dispensaries of the Province of sick patients. The triennium, no doubt, following the earthquake of 1934 was an unhealthy one—but the charts included in this review provide clear evidence of the increasing popularity of the scientific system of medicine amongst the people and of Government's sustained efforts to provide such treatment for the people. The number of patients are likely to increase further at all hospitals and dispensaries, apart from a natural growth due to their intensive increased popularity. **Conclusion.**

H. STOTT,

O.B.E., M.D., F.R.C.P., D.P.H., V.H.S., COL. I.M.S.,

Inspector-General of Civil Hospitals, Bihar.

The Triennial Report on the working of hospitals and dispensaries in Bihar for the years 1935, 1936 and 1937.

1. *General statistics of progress.*—The period covered by this report is from the 1st of January 1935 to the 31st December 1937. These years saw some important administrative changes in the province. From the 1st April 1936, Orissa was separated from Bihar. As a result, out of the total number of 690 hospitals and dispensaries in the combined province of Bihar and Orissa, 106 went to Orissa leaving 584 in Bihar on the 1st April 1936. A number of new dispensaries were, however, opened in 1937 and at the close of the triennium the total number of dispensaries in Bihar stood at 603. The total number of beds available for indoor male patients in all classes of hospitals and dispensaries was 3,410, 3,402 and 3,704 and those available for female patients were 1,631, 1,726 and 1,944 during the years 1935, 1936 and 1937, respectively. The increase in the number of beds for female patients is, as has been rightly observed by the Inspector-General of Civil Hospitals, a clear indication that the women of Bihar are shaking off their usual aversion to hospital treatment and are now keen on deriving the benefits of the scientific system of medicine. The total number of patients treated in all classes of hospitals was 6,177,313 in 1935, 6,624,488 in 1936 and 7,502,226 in 1937. The steady increase in the number of patients treated indicates both the increasing demand among members of the public for hospital treatment as well as their appreciation of the services available at hospitals and dispensaries.

2. *Honorary and subsidised medical practitioners.*—The system of associating private practitioners as honorary doctors with the work of hospitals and dispensaries was introduced during the triennium. The system is still at an experimental stage and has not yet achieved any marked success, the reason being that better qualified medical practitioners are, generally speaking, not very keen on taking upon themselves honorary duties. Government hope, however, that with the gradual increase in the number of medical licentiates and graduates a larger number of qualified and reliable practitioners will be available to take up honorary work in hospitals thus ensuring the success of the scheme. The scheme of subsidising doctors for practice in rural areas is also engaging the attention of Government.

3. *Medical Education.*—Government note with satisfaction that the M. B., B. S. degree of the Patna University was recognised by the General Medical Council of Great Britain during the triennium. A Committee of the Medical Faculty of the Patna University drew up during the period under review a new curriculum for the Patna Medical College in accordance with the recommendations of the Medical Council of India.

4. *Special diseases.*—The Inspector-General's review of special diseases is interesting and Government take this opportunity of commenting briefly on some of its more important aspects :—

Malaria and Kala-Azar.—The number of cases of malaria treated in hospitals and dispensaries of the province was 732,745 in 1935, 1,092,842 in 1936 and 1,302,498 in 1937; and the number of Kala-Azar cases treated during these three years was 57,400, 68,252 and 91,942, respectively. The growing increase in the incidence of the diseases, specially in North Bihar, has been the cause of great anxiety to Government and they are taking all possible steps for combating the diseases by free distribution of quinine, the opening of anti-malarial centres in badly affected areas and by lending the services of epidemic doctors free of charge to district boards. The Inspector-General of Civil Hospitals has published a useful note on the Kala-Azar

position in Bihar and has offered valuable practical suggestions as to the manner in which this big question may best be tackled. The matter is receiving Government's serious consideration.

Leprosy.—Though leprosy is not confined to any particular area of the province, its incidence is highest in the districts of Champaran, Muzaffarpur, Santal Parganas and Manbhum. In 1937 a new leper asylum was opened at Balarampur in the district of Manbhum bringing the total number of asylums to seven at the close of the triennium. The number of outdoor clinics increased from 36 at the beginning of the triennium to 41 at its close. Since the abolition of the post of the Leprosy Expert in 1932, no definite survey or propaganda work was carried through Government agency but at the close of the triennium an assistant surgeon was appointed as Anti-leprosy and Anti-Tuberculosis officer. The Inspector-General's suggestion that the most practical way of tackling the leper problem is to provide inexpensive semi-permanent bamboo and mud huts for the segregation of active cases where they can co-operate in some form of colony life is one which merits further examination.

Tuberculosis.—The hospital returns corroborate the general belief that this disease is on the increase. Its incidence was more marked during the triennium in the districts of Patna, Saran and Monghyr than elsewhere in the province. To combat this growing menace to the health of the people the accommodation at the Itki Sanatorium was considerably increased during the triennium under review with a view to ensure that opportunities for sanatorium treatment are available to as many sufferers as possible. An Anti-Tuberculosis Association was formed in the province in 1936 under the auspices of the King George V Memorial Fund Association. The association has devised a detailed and practical scheme, the main object of which is the provision of tuberculosis clinics at each district headquarters for treatment of early cases of tuberculosis before the curable stage is passed. The appointment of a Provincial Anti-Tuberculosis Officer by Government will, it is hoped, lead to the early organisation of district clinics and development of the other measures of relief chalked out by the association.

Cancer.—The number of patients treated at the Radium Institute at Patna rose from 812 in 1935 to 945 in 1937. The Inspector-General has rightly considered it important to bring to the notice of the public the observations of the Superintendent of the Institute that in nearly half of the total number of cases of cancer treated the disease was inside the mouth and that the widely prevalent practice of constant chewing of ***pan*** and ***khaini*** is responsible for the large majority of cases of cancer of the cheek and mouth.

Rabies.—In 1936 Government approved a scheme of decentralisation of anti-rabic treatment throughout the province. The scheme materialised in the latter part of the triennium and anti-rabic centres were opened at several sadr and subdivisional hospitals. Patients from district stations are now saved the trouble and expense of coming to the Patna Pasteur Institute for treatment. In view of the withdrawal by the railway authorities of the concession of free passes to patients coming from mufassal areas for anti-rabic treatment, the Provincial Government decided in 1937 that in respect of such patients coming from the jurisdiction of district boards all expenditure in connection with their treatment should be borne by the district boards themselves and in case of those coming from municipal areas and areas under the district committee of the Santal Parganas the expenditure will be met by Government.

5. In conclusion Government desire to record their appreciation of the valuable services rendered by the four officers who were responsible for the administration of the Medical Department during this period, namely, Colonel (now Major General) H. C. Buckley, I.M.S., Colonel (now Major General) P. S. Mills, C.I.E., I.M.S., Lieut.-Colonel (now Colonel) J. A. S. Phillips, C.I.E., I.M.S., and Colonel H. Stott, O.B.E., I.M.S. They also thank Colonel H. Stott, O.B.E., I.M.S., for his very informative and interesting report.

By order of the Governor of Bihar,

B. C. MUKHARJI,

Secretary to Government.
